Experience

Nauto - Data Science Intern Feb. 2022 – Jun. 2022
Technologies: Python, C++, TensorFlow, SQL, AWS, PySpark, Databricks, Kalman Filtering *Palo Alto, CA*

- Developed logging and data analysis software to interface with commercial and in-house GPS and inertial measurement units
- Contributed to device algorithms, including ongoing project to fuse GPS and IMU data for providing accurate online location estimates via Kalman filtering

UC Berkeley, Bay Area Neutron Group - Research Intern Nov. 2020 – Aug. 2021
Technologies: C++, ROOT, LaTeX, Nuclear Physics *Berkeley, CA*

- Coauthor for paper *Modeling ionization quenching in organic scintillators* (Materials Advances June 2022)
- Contributed to large-scale C++ data analysis framework to develop Monte-Carlo fitting routine solving longstanding (3+ years) problem group had faced concerning biased model fitting using least squares
- Presented work at 2021 IEEE Nuclear Science Symposium

SGT/KBR, NASA Quantum AI Laboratory - Research Intern Jun. 2019 – Aug. 2019
Technologies: Python, NumPy, SciPy, TensorNetwork, Pytest, TravisCI, Quantum Algorithms *Moffett Field, CA*

- Developed package for parameterized tensor network contraction to classically simulate quantum algorithms
- Participated in weekly journal club discussing recent developments in quantum computing and technology

Education

UC Berkeley Dec. 2021
BA in Physics and Data Science **GPA: 3.8**

- Relevant coursework: Software Engineering; Algorithms; Data Structures; Data Science; Decision Theory; Machine Learning; Engineering Optimization; Probability Theory; Semiconductor Circuits; Advanced Physics Experimentation Laboratory; Quantum Computing

Teaching

Teaching Assistant Jun. 2020 – Aug. 2020
Berkeley edX *Berkeley, CA*

- Spearheaded reopening of massive open online course in quantum computing with over 40,000 enrolled students
- Assisted students in interactive forum and hosted office hours

Computer Science Mentor Jan. 2020 – May 2020
UC Berkeley *Berkeley, CA*

- Taught weekly group section for data structures course
- Worked with students to identify key areas of weakness and direct review focus accordingly

Student Instructor Aug. 2019 – Dec. 2019
UC Berkeley *Berkeley, CA*

- Developed and managed an introductory course in quantum computing to 17 undergraduates
- Presented weekly lectures and prepared and graded assessments

Projects

Quantum Simulation Playground | *Julia, TravisCI, Git* Apr. 2021

- Implemented tensor train decomposition for efficient compression of high-rank tensors with limited entanglement entropy; applications in condensed matter physics and machine learning
- Implemented time-evolving block decimation for exponentially faster simulation of 1D quantum systems

Quantum Partial Search | *Python, Pyquil, Forest API, Git* Apr. 2019

- Implemented a variation of Grover's algorithm for unstructured search in sublinear time using a quantum processor

Gitlet | *Java, Git* Dec. 2018

- Architected and implemented a mini version-control system inspired by Git
- Implemented branching, merging, staging, and committing features

Technical Skills

Languages: Java, Python, Julia, C/C++, SQL, JavaScript, HTML/CSS, Ruby
Libraries: NumPy, SciPy, Pandas, Matplotlib, TensorFlow, PySpark
Developer Tools: Git, GDB, AWS, Databricks, TravisCI, Vim, Visual Studio, Jupyter
Other: Excel, Kalman Filters, Design Patterns
